

Small Kiosk Telemetered Outstation

The AquaHawk Midi is a compact, small kiosk outstation designed to work in conjunction with a multi-parameter sonde that will measure water quality.

The kiosk can be used for **water quality monitoring in rivers** or **final effluent monitoring in Treatment Works**.

The AquaHawk Midi features:

- ☞ Small, compact and lightweight for quick, easy deployment.
- ☞ Can be coloured to suit the environment.
- ☞ Looks like typical street furniture.
- ☞ Configurable to different sonde manufacturers.

Quality data, collected safely and without compromise

Key features & benefits

- 
Microprocessor
 Control of pump cycle, measurement intervals, data logging, battery control, data transmission & Security.
- 
Programmable Alarms
 Sent immediately via SMS or email. Logging frequency can be changed upon alarm.
- 
Low Power with Solar panel
 Available with optional solar panel if needed (based on sample frequency).

Applications

- 
 The AquaHawk Midi is designed for use with a multi-parameter sonde and with minimal moving parts it requires very little maintenance.
- 
 Flexible and capable of sending near real-time water quality data to our secure data platform or API data to third party platforms.
- 
 The AquaHawk Midi is lightweight, and has a very small footprint and is easy to install. It can be positioned in an elevated position to reduce the impact of flooding.

Product information

Vacuum Pump	Vacuum-Pumping System 6.5m Vertical Lift Auto pre & post sample purge
Power	3 x lead-gel-batteries 12 Volt 9 Ah
Enclosure	Weather Resistant 430x360x200mm HxWxD Vented Reinforced Polyester
Security	Schneider Enclosure Low Battery alarm GPS tracking system (optional extra)
Other	17.7 KG in weight (with battery)
